

State Interoperable Executive Committee

Coconino County Sheriff's Office wishes to place on the agenda for the SIEC meeting on March 16, 2010 the item of dual control of AIRS stations located at Juniper Mountain, southwest of Seligman, Arizona in Yavapai County and Brookbank Radio site, located in Navajo County just east of Forest Lakes, Arizona.

A discussion with Scott Tillman, Arizona Department of Public Safety Wireless Bureau, indicates that the process of dual control with Yavapai County can be accomplished with the addition of another Mux at Juniper Mountain site and the Mt. Elden site at Flagstaff. Additional programming of the PL tone for Coconino County AIRS programmed into the VHF radio suite at Juniper Mountain and adding transmission cards to the existing micro wave link on Mt. Elden and at the Police/Sheriff 911 facility in Flagstaff.

Replicating this process at the Brookbank Communications site in Navajo County and again on Mt. Elden at Flagstaff will allow dual control with Navajo County of the AIRS suite at the Brookbank Communications site.

Scott Tillman advised that he believed the Mux equipment was available through the Arizona Department of Public Safety Wireless Bureau. Scott Tillman advised however the costs for travel, installation, and programming of the Mux equipment and additional purchase of the Micro wave cards, travel, installation, programming and testing of the cards would be the responsibility of the requesting agency or agencies.

The estimate to purchase the four additional Micro Wave cards is approximately \$3,500 including taxes. Travel, installation, programming and testing costs have yet to be determined as those are based on mileage and hourly rates for technician total time to completion of all installations. We are currently seeking funding resources for equipment purchase, travel, installation, programming and testing fees for this project.

Respectfully,

Tom Florman

Communications Manager

Coconino County Sheriff's Office
